

SPECIALIST ACNE SCAR RECONSTRUCTION MENU

Physician-delivered surgical CO₂ laser protocols engineered around scar morphology, fibrotic depth, and optical shadow reduction.

1. REVIDA Repair 1 SESSION Full Face: £1,095 • Part of Face: £945

FRACTIONAL CO₂ RESURFACING FOR MILD SCARRING & POST-ACNE TEXTURE

Targets superficial post-acne blemishes, shallow boxcar indentations, and early rolling texture. Stimulates organized dermal neocollagenesis to soften crater margins and refine overall skin texture without prolonged downtime.

Anaesthesia: Topical cream (Nerve blocks: +£95) Downtime: 3–5 days (mild redness & micro-crusting)

Courses (10% Off): Full Face: £2,956 | Part: £2,551

2. REVIDA Repair-CROSS 1 SESSION Full Face: £1,495 • Part of Face: £1,350

FOCAL TCA CROSS + FRACTIONAL CO₂ RESURFACING FOR ICE-PICK PITS

Combines high-strength focal chemical reconstruction (up to 80% Trichloroacetic Acid applied precisely into deep vertical ice-pick or small boxcar pits) with surrounding fractional CO₂ resurfacing. Triggers localized collagen closure from the bottom up.

Anaesthesia: Topical cream (Nerve blocks: +£95) Downtime: 4–7 days (focal pin-point crusting for 7–10 days)

Target: Ice-pick & narrow punctate pits

3. REVIDA Refine CORE DEEP DERMAL Full Face: £1,695 • Part of Face: £1,450

DEEP RETICULAR FRACTIONAL MICRO-DRILLING WITH PRECISION LASER SCULPTING

Our most popular reconstructive procedure for moderate-to-severe boxcar and rolling scars. High-energy fractional columns penetrate straight into the reticular dermis to sever fibrotic scar anchors and stimulate deep collagen lifting, combined with manual laser rim sculpting.

Anaesthesia: Full regional nerve blocks included Downtime: 5–7 days (fading pinkness for 3–4 weeks)

Courses (10% Off): Full Face: £4,576 | Part: £3,915

4. REVIDA Refine-X SUBCISION RELEASE Full Face: £2,295 • Part of Face: £2,050

DEEP RETICULAR FRACTIONAL CO₂ + PRECISION LASER SCULPTING + TARGETED SUBCISION

Specifically engineered for severe, anchored rolling scars held down by deep fibrous cords. Integrates surgical subcision to mechanically sever tethered anchors, dissect the tissue, and lift depressions, followed immediately by deep fractional laser remodelling.

Anaesthesia: Nerve blocks & sub-lesional infiltration included Downtime: 7–10 days (subcision bruising & laser healing)

Scope: Includes 1 area of targeted surgical subcision

DEFINITION OF "PART OF FACE" PRICING

Part of Face pricing covers and includes any or all of the three primary acne scarring anatomical zones: central cheeks, central chin, and central forehead at one transparent flat rate.

THE APEX SCAR RECONSTRUCTION MATRIX

Solving both dimensions of severe atrophic acne scarring: deep vertical tethering and sharp optical shoulder shadows.

5. REVIDA Resolve-FX-Duo 2-STAGE MATRIX Full Face: £4,495 • Part of Face: £3,250

COMPLETE 2-STAGE SURGICAL LASER MATRIX: STAGE 1 DEEP RETICULAR RELEASE + STAGE 2 CONFLUENT SHOULDER SMOOTHING

Our definitive, doctor-delivered surgical scar programme for severe, long-standing atrophic, boxcar, and rolling scars. Rather than overloading the skin in a single traumatic appointment, Resolve-FX-Duo separates your reconstruction into two dedicated, uncompromised surgical visits spaced 3 to 6 weeks apart:

Stage 1 (Week 0) • Deep Reticular Architectural Uncoupling (REVIDA Refine): Ultra-deep fractional CO₂ micro-drilling targets the deep reticular dermis to sever fibrotic tethers and push crater floors upward from within. Includes regional nerve blocks (£1,695 standalone value).

Stage 2 (Week 3 to 6) • Confluent Full-Field Shoulder Smoothing & Planishing: Once the deep dermal scaffold has regenerated, Stage 2 delivers a continuous, 100% full-field ablative sweep across scarred subunits with hexagonal cluster blending and fractional border feathering. Planes down steep, 90-degree boxcar shoulders so they no longer cast shadows under overhead light (£3,600 standalone equivalent).

Anaesthesia: Regional nerve blocks & local infiltration included for BOTH visits

Downtime: Two safe 1-week recoveries (Stage 1: 5–7d; Stage 2: 7–8d) **Package Advantage:** Saves £800 vs standalone equivalents

THE 10-WEEK STEP-UP PRIVILEGE

Unsure whether you need the full two-stage matrix? You may begin with a standalone full-face **REVIDA Refine (£1,695)**. If you decide to complete Stage 2 (the full-field confluent smoothing session) within 10 weeks, you unlock the complete Resolve-FX-Duo package for the remaining balance plus a nominal £100 administrative adjustment (**£2,900 balance**; £4,595 total phased investment—saving £700 against standalone rates).

CLINICAL GUIDANCE FOR MATURE PATIENTS (AGE 45+)

For mature patients presenting with historic acne scarring compounded by severe solar elastosis, facial laxity, and deep static wrinkles, Dr Brad may recommend our flagship multi-pass surgical protocol, **REVIDA Resurface (£4,995)**, as an alternative or primary intervention. Discuss this during your clinical consultation.

Optional Late Refinement Stage

Special Rate: £1,239

For exceptionally complex scarring patterns, patients who have completed the full Resolve-FX-Duo matrix may elect an optional deep fractional refinement session 3 to 9 months later to push collagen remodelling even further. Offered at a special continuation rate of £1,239 (saving over 25% off standalone Refine).

STANDALONE FOCAL SCAR PROCEDURES

Targeted minor surgical interventions for localized tethered bands or deep, narrow ice-pick pits.

FOCAL TREATMENT	CLINICAL SCOPE & TECHNIQUE	STANDALONE PRICE
50%–80% TCA CROSS	Chemical Reconstruction of Skin Scars. High-concentration Trichloroacetic Acid applied focally into individual ice-pick and narrow boxcar pits to trigger bottom-up collagen closure.	£495
Targeted Surgical Subcision	Mechanical release of deep fibrotic tethering using specialized Nokor or blunt dissection cannulas under local anaesthesia. Releases anchored rolling scars from underlying structures. (1 Area = Forehead, Chin, 2 Temples, or 2 Cheeks)	£725

REVIDA® LID-LIFT: SPECIALIST EYELID UPGRADES

Harmonise your final result by addressing peri-orbital crepiness and eyelid laxity during any facial laser session.

EYELID UPGRADE OPTION	CLINICAL SCOPE	ADD-ON PRICE
REVIDA Lid-Lift	Standard fractional CO ₂ laser applied to either upper OR lower orbital eyelids.	£395
REVIDA Lid-Lift+	High-intensity fractional CO ₂ laser applied to BOTH upper and lower eyelids for complete tightening.	£695

DIAGNOSTIC MAPPING & CLINICAL STANDARDS

Rigorous diagnostic evaluation and safety protocols administered directly by Dr Bradley Tomkins.

Diagnostic Consultation (£60) 30 minutes with Dr Brad. Examination of scar morphology under angled cross-polarized light, dynamic skin stretch tests to evaluate tethering, Fitzpatrick skin typing, and customized mapping.	Complex Multi-Site Test Patch (£195) Custom test patching across 2 to 3 discrete scarred zones to demonstrate tissue safety, tolerability, and healing velocity. The full £195 fee is credited 100% toward full treatment when delivered within 30 days.

WHY REGIONAL NERVE BLOCKS ARE ESSENTIAL IN SCAR SURGERY

Because effective acne scar revision requires penetrating deep into the reticular dermis, topical anaesthetic creams alone are clinically inadequate. All Refine, Refine-X, and Resolve-FX-Duo procedures include comprehensive **doctor-administered regional peripheral facial nerve blocks** and sub-lesional local infiltration as standard—ensuring 100% operative analgesia and total procedural comfort.

MASTER QUICK-REFERENCE INVESTMENT MATRIX

Transparent pricing across all scar protocols, combination options, and structured multi-session courses.

PROTOCOL & AREA	SINGLE SESSION	WITH LID-LIFT+	3X COURSE (10% OFF)	3X WITH LID-LIFT+	4X COURSE (15% OFF)	4X WITH LID-LIFT+
REVIDA Repair (Full Face)	£1,095	£1,790	£2,956	£5,041	£3,723	£6,503

REVIDA Resolve-FX-Duo (Part of Face)	£3,250	£3,945	Indivisible 2-Stage Reconstructive Matrix (Refine + Full-Field Sweep)			

Course Delivery Timelines

Courses of 3 are typically scheduled over 5 months; courses of 4 are scheduled over 6 months. 10% and 15% course privileges apply strictly to standalone Repair and Refine treatments paid upfront.

Real Biological Endpoints

Acne scar revision remodels native tissue. Significant scar lifting (50%–90%) may typically develop progressively over 6 to 12 months as dermal collagen cross-links and matures—producing permanent anatomical improvement.
